

Abstract

**A sealable biaxially oriented polyester film with one
matt side**

5

The invention relates to a sealable polyester film with
one matt side and with at least one base layer (B),
with a sealable outer layer (A), and with a further
matt outer layer (C), where the sealable outer layer
10 (A) has a minimum sealing temperature below 120 °C and
a seal seam strength of at least 1.3 N/15 mm of film
width, and the topographies of the sealable outer layer
(A) and of the matt outer layer (C) are characterized
by particular features. The inventive film is
15 particularly suitable for use in flexible packaging,
and in particular for use on high-speed packaging
machinery.
